Appl. No. 10/803,244 Reply to Examiner's Action dated 11/30/2005

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) An apparatus, comprising,

a substrate having a planar surface

first and second electrodes located on said planar surface, said first electrode having a top surface and a lateral surface, said lateral surface having an edge near or in contact with said substrate; an electrode insulating layer located on said top surface:

a self-assembled layer located on said lateral surface; and

wherein said second electrode is in contact with both said self-assembled layer and said electrode insulating layer and

wherein said first and second electrodes are in contact with opposite surfaces of said electrode insulating layer.

- 2. (Original) The apparatus of claim 1, wherein said self-assembled layer comprises a stack of at least two self-assembled layers.
- 3. (Original) The apparatus of Claim 2, wherein said stack of self-assembled layers comprises an end group of a first organic molecule in a first self-assembled layer chemically coupled to an end group of a second organic molecule in a second self-assembled layer.

NO. 3464 P. 4

Appl. No. 10/803,244 Reply to Examiner's Action dated 11/30/2005

- 4. (Original) The apparatus of Claim 3, wherein said coupling between said end groups of said first and second organic molecules includes a copper bridge.
- 5. (Original) The apparatus of Claim 1, wherein said self-assembled layer comprises non-conductive organic molecules.
- 6. (Original) The apparatus of Claim 1, wherein said self-assembled layer comprises semiconductive organic molecules.
- 7. (Original) The apparatus of Claim 1, wherein said self-assembled layer is covalently bonded to said lateral surface.
- 8. (Currently Amended) The apparatus of Claim 1, wherein said self-assembled layer comprises a channel and said apparatus comprises an organic field effect transistor, wherein said channel has a charge mobility of at least about 1 x 10⁻³ cm² V⁻¹ s⁻¹.
- 9. (Original) The apparatus of Claim 1, wherein a footprint of said electrode insulating layer is substantially aligned with said top surface.

Claims 10-20 (Canceled)

Appl. No. 10/803,244 Reply to Examiner's Action dated 11/30/2005

- 21. (New) The apparatus of Claim 1, wherein said second electrode overhangs said first electrode.
- 22. (New) The apparatus of Claim 1, wherein a thickness of said electrode insulating layer is greater than a separation distance between said first electrode and said second electrode.
- 23. (New) The apparatus of Claim 1, wherein a thickness of said electrode insulating layer is less than about 500 nanometers.
- 24. (New) The apparatus of Claim 1, wherein said first electrode and said second electrode are separated by a distance of less than about 5 nanometers.
